

Society of Thoracic Surgeons

Congenital Heart Surgery Database  
Monthly Webinar

January 16, 2024

# Agenda

---

- Welcome and Introduction
- STS Update
- STS Data Manager Education (Chasity Wellnitz and Leslie Wacker, CHSD Consultants)
- Q&A

# STS Updates

- January Training Manual is posted
- Fall 2023 Harvest Analysis complete and reports posted
  - Report related questions should be directed to [stsdh\\_helpdesk@sts.org](mailto:stsdh_helpdesk@sts.org)
  - Analyses Overview posted on STS Website (Dated **Aug 10 2023**)
  - Harvest Composite Quality Ratings Summary to be post by COB today
- CHSD Public Reporting
  - Next update is scheduled to take place in late Q1 2024 and will include results from the Fall 23 analysis.
  - If you have **not previously consented** to publicly report your data, the next submission deadline is Friday, February 2<sup>nd</sup>.
- Spring 24 Harvest is underway
  - Surgery dates 1/1/2020 – 12/31/2023

# 2024 Harvest Schedule

<b>Term</b>	<b>Harvest Submission Window Close</b>	<b>Opt-Out Date</b>	<b>Includes Procedures Performed Through:</b>	<b>Report Posting</b>
<b>Spring 2024</b>	3/22/2024	3/26/2024	12/31/2023	Summer 2024
<b>Fall 2024</b>	9/27/2024	10/1/2024	6/30/2024	Winter 2024

*Data Submission Open is continuous for all harvest terms. Data Submission Close occurs at 11:59 p.m. Eastern on the date listed.*

## 2024 AQO: A Data Managers Meeting

- Join us in Music City: Nashville, Tennessee
- September 10 - 13

# 6.23.2 Data Manager Education

January 16, 2024

# Discussion Topics

## Definition Review

- Prior op count
- CPB time on MCS
- Operative mortality
- Blood products
- Unplanned cardiac reop

## Analysis Report

## Interpretation

## Prior Operation Count Change – *Why?*

- Prior sternotomy procedure risk not adequately captured in current count  
*e.g., patients undergoing heart transplant who were previously implanted with a VAD*

# Prior Operation Count Change – *What?*

## Number of Prior Cardiac Operations

Prior procedure (2380) VAD  
implantation where the:

- Optype is VAD
- Incision type is any but other

Prior procedure (2360) ECMO  
cannulation where the:

- Optype is ECMO
- Incision type is any but other

# Prior Operation Count Change – *TM Update*

## Number of Prior Cardiac Operations

*Indicate the number of surgical procedures performed prior to this procedure based on the criteria below:*

- Any prior surgery with OpType (1) CPB Cardiovascular
- Any prior surgery with OpType (2) No CPB Cardiovascular
- Any prior surgery where the procedure is (2380) VAD, Implant if and only if the OpType is (6) VAD with CPB or (7) VAD without CPB and the Incision Type (IncisionTypeMulti) is not (6) Other
- Any prior surgery where the procedure is (2360) ECMO cannulation if and only if the OpType is (3) ECMO and the Incision Type (IncisionTypeMulti) is not (6) Other

# Prior Operation Count Change – *What?*

## Number of Prior CPB Cardiac Operations

Procedure (2380) VAD implantation where the:

- Optype is VAD with CPB

# Prior Operation Count Change – *TM Update*

## Number of Prior CPB Cardiac Operations

*Indicate the number of surgical procedures performed prior to this procedure based on the criteria below:*

- Any prior surgery with OpType (1) CPB Cardiovascular
- Any prior surgery with OpType (6) VAD with CPB

Prior Operation  
Count Change -  
*Logistics*

- Operations on or after January 01, 2024
  - Do not go back and recode previous operations*
- Must have documentation to count a procedure
  - e.g., ECMO cannulation documented via median sternotomy

## CPB Time While on ECMO/VAD

### **Clarification to (SeqNo 2060) CPB Time – *same as V3.41***

Scenario where the ECMO/VAD circuit is providing CPB support (optype CPB Cardiovascular):

- Enter the perfusion fields as completely as possible
- If unknown/not applicable, leave blank
- CPB time is the length of the procedure: Skin Incision Start Time (SeqNo 1835) to Time of Skin Closure (SeqNo 1965) *(will be added to the TM)*

# Postop Event Coding

## Existing Training Manual

Assign the applicable postoperative events to (1) the index operation as that is where all events will be assigned upon analysis or (2) the operation that is most closely associated with the event.

*No change in where to assign postoperative events between versions 3.41 and 6.23.2*

# Operative Death - Revisited

Existing Training  
Manual -  
*Unchanged between  
versions 3.41 and 6.23.2*

Operative Mortality includes: (1) all deaths, regardless of cause, occurring during the hospitalization in which the operation was performed, even if after 30 days (including patients transferred to other acute care facilities); and (2) all deaths, regardless of cause, occurring after discharge from the hospital, but before the end of the thirtieth postoperative day.

***Intent/Clarification:***

This field should be completed accurately for all procedures performed (index and non-index) including all operation types regardless of whether the case will be analyzed or included in a specific analysis table.

## Blood Product Administration

Captured in multiple sections of the database:

- Operative section: all patients
- Postoperative section:  $\geq 18$ -years of age only
- Anesthesia section: if participating

*Each section collects blood products differently – also different between V3.41 and 6.23.2*

# Operative Section: *All Patients*

<b>Blood and Blood Related Products (Including CPB Blood Prime Units)</b>	
Autologous Transfusion: <input type="checkbox"/> Yes <input type="checkbox"/> No	
Transfusion of Non-Autologous Blood Products During or After Procedure: <input type="checkbox"/> Yes <input type="checkbox"/> No	
	<i>(If Yes →)</i>
	Transfusion of Non-Autologous Blood Products Initiated Before Leaving OR: <input type="checkbox"/> Yes <input type="checkbox"/> No
	Transfusion of Blood Products within 24 hours post procedure: <input type="checkbox"/> Yes <input type="checkbox"/> No
	Transfusion of Blood Products after 24 hours post procedure: <input type="checkbox"/> Yes <input type="checkbox"/> No

DCF

Existing  
Training  
Manual

## ***Intent/Clarification:***

Indicate if the patient received any non-autologous (not self-donated) blood products during or after this procedure. This includes products administered during the cardiopulmonary bypass (CPB) circuit blood prime.

Includes non-autologous blood products administered any time after this procedure, regardless of the timeframe.

Complete this field for each operative case separately.

## Postoperative Section: $\geq 18$ -years

*(4690) Blood Prod (products used postoperatively y/n)*

If yes → number of units administered specific products

### Training Manual

***Intent/Clarification:***

If the patient did not expire in the OR and is age  $\geq 18$  years, indicate if any blood products were transfused any time after OR exit time. Do not include blood products started in the OR.

**Please note, answer this field on the index operation **only**, not the initial operation. Code (2)  
No for non-index operations (updated Sept-23).**

Anesthesia Section: *all patients if participating*

*Parent field to blood products from Operative Section:*

- (2350) Transfusion of Non-Autologous Blood Products Initiated Before leaving OR
- (2355) Transfusion of Non-Autologous Blood Products Within 24 Hours Post-Procedure

*If yes – enter amounts (ml) of each specific product*

Complete this for every procedure where anesthesia data is being collected. In the event another operation occurs within 24-hours, stop collection on the first event and begin collection on the subsequent procedure.

## Unplanned Cardiac Reoperation Reason

SeqNo 4755: Postoperative Event – Reoperation Reason

Reop Reason Select all that apply:

Residual or recurrent lesion

Reoperation for bleeding or suspected bleeding

Mediastinal reexploration for reasons other than recurrent bleeding or suspected bleeding, residual or recurrent lesion (includes washouts)

*While the header states mediastinal exploration for reason other than...the intent/clarification states...*

# Unplanned Cardiac Reoperation Reason

## SeqNo 4755: Postoperative Event – Reoperation Reason

<p>Mediastinal <u>reexploration</u> for reasons other than recurrent bleeding or suspected bleeding, residual or recurrent lesion (includes washouts)</p>	<p>Unplanned cardiac reoperation (an operation with operation type CPB Cardiovascular or No CPB Cardiovascular) for any reason other than <u>recurrent bleeding or suspected bleeding, residual/recurrent lesions</u>.</p> <p>Includes mediastinal explorations, mediastinal washouts, and sternal reopening when not done for bleeding or suspected bleeding.</p>
---	--

# In Summary

Prior operation count changes start  
with surgery dates on or after  
01/01/24

Submit an FAQ when unsure

Find documentation of incision type  
– do not assume!

# Discussion Topics

## Definition Review

- Prior op count
- CPB time on MCS
- Operative mortality
- Blood products
- Unplanned cardiac reop

## **Analysis Report Interpretation**

# CHSD Analysis Overview

## Congenital Heart Surgery Database

The STS Congenital Heart Surgery Database is currently operating under version 6.23.2.

Table of Contents

**All rights reserved**

While these reports contain the Participant's individual data, they also contain confidential and proprietary aggregate data from the STS National Database and information derived therefrom ("STS Information"). Individual Participants may use their own data for internal quality assurance and monitoring of quality improvement processes. As a tool for service-building, Participants may use their data to participate in certain approved activities for purposes of promotion and marketing of the specialty program.

**The STS aggregate Information contained in this report may not be further used or disclosed without the Society's prior express written permission, unless and until the relevant STS Information has been released to the public by the Society.**

# Analytic Report Interpretation

- IQVIA Platform → Operational Reports → CHSD Risk Adjusted Dashboard Report

The screenshot displays the IQVIA Operational Reports interface. On the left is a dark sidebar with navigation options: 'Welcome, Leslie Wacker', 'Currently Viewing', 'PLATFORM' (Upload, Form Management, Notifications), 'ANALYTICS' (Operational Reports), 'RESOURCES' (Library), and 'ACCOUNT' (My Account, Log out). The main content area is titled 'Operational Reports' and contains two expandable sections. The first section, 'CHSD Reports', lists four reports: 'Missing Variable Report', 'Primary Procedure Mismatch and Mortality Eligibility Summary Report', 'Harvest Summary Report', and 'CHSD Risk Adjusted Dashboard Report'. The second section, 'Contact List Report', lists one report: 'Contact List Report'. Each report includes a brief description of its function.

**Welcome,**  
Leslie Wacker

Currently Viewing

**PLATFORM**

## Operational Reports

### CHSD Reports

**Missing Variable Report**  
This report identifies important field-specific data quality issues that affect the completeness of your harvest and may impact analysis and reporting of your data in the National Report. The data version, surgery year, short name and field name are shown for each issue to help you target and prioritize your data review and clean-up activity. Information on missing data is only reported for variables used in reports or risk-adjustment models.

**Primary Procedure Mismatch and Mortality Eligibility Summary Report**  
The Primary Procedure Mismatch report will identify operation records where the primary procedure that was assigned by the Participant does not match the Primary Procedure assigned by the Data Warehouse. The Case Eligibility for Inclusion in Mortality Analysis report will provide users with a summary of all cases that are identified as ineligible for risk analysis.

**Harvest Summary Report**  
This report will allow users to see the current status of system validations on all active records saved in the database based on the identified surgery data range entered.

**CHSD Participant Dashboard Report**  
This participant dashboard report will display NON-ANALYZED data results for the congenital heart surgery database.

**CHSD Risk Adjusted Dashboard Report**  
The electronic CHSD Risk Adjusted Report includes analyzed harvest data results in place of the previous reports provided as a PDF to participants. This report allows participants to compare their risk-adjusted performance against the STS overall for the same time period.

### Contact List Report

**Contact List Report**  
This report identifies the contact name and the associated role in the report

# Analytic Report Interpretation

- Select Reporting Period
- Apply Parameters

The screenshot shows a web application interface for "CHSD Reports". On the left is a dark sidebar with icons for home, list, notifications, checkmarks, documents, user profile, and power. The main content area has a header "CHSD Reports" and a sub-header "CHSD Risk Adjusted Dashboard Report". Below this is a "Parameters" section containing a "Reporting Period" dropdown menu with "Select" as the current value. A blue "Apply Parameters" button is located on the right side of the form.

# Analytic Report Interpretation

- NOT ALL are “Risk Adjusted”

The screenshot displays the 'Congenital Heart Surgery Database' interface for Participant ID: 50065, with the period ending in Jun 2023. The interface is organized into three main report categories, each with a list of report links:

Risk Adjusted & Analytical Reports	Lesion Specific Reports	Anesthesia Reports
<a href="#">Number submitted and in analysis (Table 1)</a>	<a href="#">Atrial Septal Defect (Table 20)</a>	<a href="#">All Operations</a>
<a href="#">Number submitted and in analysis Neonates and Infants (Table 7)</a>	<a href="#">Ventricular Septal Defect (Table 21)</a>	<a href="#">CPB/No CPB Cardiovascular Operations</a>
<a href="#">Number submitted and in analysis Children and Adults (Table 7)</a>	<a href="#">Coarctation of the Aorta (Table 22)</a>	<a href="#">CPB/No CPB Cardiovascular Operations by age group</a>
<a href="#">Model 1 Participant Report (Table 16)</a>	<a href="#">Tetralogy of Fallot Palliation (Table 23)</a>	<a href="#">Time to Initial Extubation by age group</a>
<a href="#">Benchmark Operations: Mortality &amp; Postoperative LOS (Table 18)</a>	<a href="#">Tetralogy of Fallot Repair (Table 24)</a>	<a href="#">Time to Initial Extubation by procedures</a>
<a href="#">Risk Stratified: Mortality &amp; Postoperative LOS (Table 19)</a>	<a href="#">AV Canal (Table 25)</a>	<a href="#">Time to Initial Extubation by procedures cont.</a>
<a href="#">All Patients, Operative Mortality, by STAT Mortality (Figure 7)</a>	<a href="#">Aortic Stenosis and Insufficiency (Table 26)</a>	
<a href="#">Missing Data Summary (Table 29)</a>	<a href="#">Transposition of the Great Arteries (Table 27)</a>	
<a href="#">Extubated in the OR</a>	<a href="#">Hypoplastic Left Heart Syndrome (Table 28)</a>	

# Analytic Report Interpretation

- NOT ALL are “Risk Adjusted”

The screenshot displays the Congenital Heart Surgery Database interface for Participant ID: 50065, with the period ending in Jun 2023. The interface is organized into three main columns of reports:

- Risk Adjusted & Analytical Reports:**
  - Number submitted and in analysis (Table 1)
  - Number submitted and in analysis Neonates and Infants (Table 7)
  - Number submitted and in analysis Children and Adults (Table 7)
  - Model 1 Participant Report (Table 16)
  - Benchmark Operations: Mortality & Postoperative LOS (Table 18)
  - Risk Stratified: Mortality & Postoperative LOS (Table 19)
  - All Patients, Operative Mortality, by STAT Mortality (Figure 7)
  - Missing Data Summary (Table 29)
  - Extubated in the OR
- Lesion Specific Reports:**
  - Atrial Septal Defect (Table 20)
  - Ventricular Septal Defect (Table 21)
  - Coarctation of the Aorta (Table 22)
  - Tetralogy of Fallot Palliation (Table 23)
  - Tetralogy of Fallot Repair (Table 24)
  - AV Canal (Table 25)
  - Aortic Stenosis and Insufficiency (Table 26)
  - Transposition of the Great Arteries (Table 27)
  - Hypoplastic Left Heart Syndrome (Table 28)
- Anesthesia Reports (highlighted with a red circle):**
  - All Operations
  - CPB/No CPB Cardiovascular Operations
  - CPB/No CPB Cardiovascular Operations by age group
  - Time to Initial Extubation by age group
  - Time to Initial Extubation by procedures
  - Time to Initial Extubation by procedures cont.

**Risk Adjusted & Analytical Reports**

**Number Submitted and in analysis (Table 1)**

*Please refer to the CHSD Risk Adjusted Calculation spreadsheet within the IQVIA Library for technical details*

Operations are classified into various sections based upon the logic below:

Section	Category	Inclusion
Number of Operations/Patients	Operations Submitted	All operations submitted with a surgical date within the analytic time period
	Operations in Analysis	All operations submitted with a surgical date within the analytic time period with the Operation Type CPB, CardioVascular or No CPB, CardioVascular and an assigned gender of male or female
	Patients in Analysis	All index operations submitted with a surgical date within the analytic time period with the Operation Type CPB, CardioVascular or No CPB, CardioVascular and an assigned gender of male or female
Operative Mortality, STAT Mortality Categories (1-5)	Number of Mortalities	Count of all index operations submitted with a surgical date within the analytic time period with the Operation Type CPB, CardioVascular or No CPB, CardioVascular and an assigned gender of male or female AND designated as an operative mortality
	Number Eligible	Count of all index operations submitted with a surgical date within the analytic time period with the Operation Type CPB, CardioVascular or No CPB, CardioVascular and an assigned gender of male or female AND whose operative mortality data is not null
	Mortality Percent	Number of mortalities / number eligible
	Mortality 95% CI	Calculated 95% Confidence Interval

### CHSD Risk Model 1 – Operative Mortality and Adjusted Mortality (Table 16)

*Please refer to the CHSD Risk Adjusted Calculation spreadsheet within the IQ*

The purpose of this report is to compare your site performance with STS aggregate data to provide a summary statement versus the previously reported star ratings, which is intended to reflect the intent of providing overall outcomes ratings and is the best way to

Participants are provided an Overall Rating for the Neonates + Infants + Children and are provided with confidence intervals and expected outcomes metrics.

#### Risk Adjusted & Analytical Reports

Number submitted and in analysis (Table 1)

Number submitted and in analysis Neonates and Infants (Table 7)

Number submitted and in analysis Children and Adults (Table 7)

Model 1 Participant Report (Table 16)

Benchmark Operations: Mortality & Postoperative LOS (Table 18)

Missing Data Summary (Table 29)

Extubated in the OR

Tetralogy of Fallot Repair (Table 24)

Time to Initial Extubation by procedures

AV Canal (Table 25)

Time to Initial Extubation by procedures cont.

Aortic Stenosis and Insufficiency (Table 26)

Transposition of the Great Arteries (Table 27)

Hypoplastic Left Heart Syndrome (Table 28)

## Congenital Heart Surgery Database

### Benchmark Operations: Mortality & Postoperative LOS (Table 18)

*Please refer to the CHSD Risk Adjusted Calculation spreadsheet within the IQ*

Operations are classified into the various benchmark operation groups according to the operation.

Note: PLOS is set to missing if >364 days from surgery date

Procedure Type	Abbreviation	STS-CHSDB Primary Procedure Code
1. VSD repair	VSD	110 = VSD repair, Patch 5001 = VSD repair, Patch + ASD repair,
2. TOF repair	TOF	350 = TOF repair, No ventriculotomy 360 = TOF repair, Ventriculotomy, Nontr

#### Risk Adjusted & Analytical Reports

Number submitted and in analysis (Table 1)

Number submitted and in analysis Neonates and Infants (Table 7)

Number submitted and in analysis Children and Adults (Table 7)

Model 1 Participant Report (Table 16)

Benchmark Operations: Mortality & Postoperative LOS (Table 18)

Risk Stratified: Mortality & Postoperative LOS (Table 19)

All Patients, Operative Mortality, by STAI Mortality (Figure 7)

Missing Data Summary (Table 29)

Extubated in the OR

## Congenital Heart Surgery Database

### Benchmark Operations: Mortality & Postoperative LOS (Table 18)

*Please refer to the CHSD Risk Adjusted Calculation spreadsheet within the IQ*

Available starting with version 3.4.1

### Risk Stratified: Mortality & Postoperative LOS (Table 19)

*Please refer to the CHSD Risk Adjusted Calculation spreadsheet within the IQ*

Operations are classified by STAT Mortality Category and further analyzed.

Note: PLOS is set to missing if >364 days from surgery date

		5001 = VSD repair, Patch + ASD repair,
2. TOF repair	TOF	350 = TOF repair, No ventriculotomy
		360 = TOF repair, Ventriculotomy, Nontr

#### Risk Adjusted & Analytical Reports

### Lesion Specific Reports (Tables 20 - 28)

*Please refer to the CHSD Risk Adjusted Calculation spreadsheet within the IQVIA Library for technical details*

Specific inclusionary and exclusionary criteria must be met for operations to be included in each of the nine lesion specific tables of the report. For a procedure to be included in a given table, the primary diagnosis **and** primary procedure of the

Analyses Overview - 22

index operation must have both come from the allowable list. These criteria were designed to identify populations that are analytically comparable across Participants but note **only specific procedure/diagnosis combinations may be reported**.

### Required Primary Diagnosis and Procedure Lists for Inclusion in Lesion-Specific Reporting

Lesion	Primary Diagnosis	Primary Procedure
Atrial Septal Defect (ASD)	20 - ASD, Secundum	10 - PFO, Primary closure
	30 - ASD, Sinus venosus	20 - ASD repair, Primary closure
	40 - ASD, Coronary sinus	5007 - ASD repair, Primary closure + PAPVC repair
	50 - ASD, Common atrium (single atrium)	30 - ASD repair, Patch
	10 - PFO (Patent foramen ovale)	40 - ASD repair, Device
		2110 - ASD repair, Patch + PAPVC repair
		50 - ASD, Common atrium (single atrium), Sentation

# CHSD Analysis Overview

## General Overview

Rules for Identifying Episodes of Care

Rules for Assigning Index Operations

Determination of Primary Diagnosis and Primary Procedure

Fields Used for Mortality Calculation

Determination of Case Eligibility for Inclusion in Mortality Analysis

Operative Mortality Status at the Level of Episode of Care

Method of Mortality Calculation

Risk Adjusted & Analytical Reports

Benchmark Operations: Mortality & Postoperative LOS (Table 18)

Required Primary Diagnosis and Procedure Lists for Inclusion in Lesion-Specific Reporting

Risk Adjusted Outcomes: Overview

CHSD Risk Model Specifications

Interpretation of Adjusted Mortality Results

Congenital Cardiac Anesthesia

Combination Procedure Codes

**STS National Database**<sup>™</sup>  
Trusted. Transformed. Real-Time.

# CHSD Analysis Overview

## Determination of the Primary Procedure of an Operation and Classification of Multiple-Procedure Operations

The guiding principle for determining the primary procedure for a given operation is to select the procedure with the highest STAT Mortality Score.

Analyses Overview - 4

Some procedures will be mapped to available combination procedures. **The individual procedures that make up the combination procedures will not be removed but will remain as secondary procedures. These individual procedures that make up the combination procedures will not be considered for primary procedure determination.** For a list of the combination procedure codes, please refer to the STS Website.

If there is a tie for highest STAT Mortality Score:

- a. The procedure indicated as the primary by the participant will become the primary procedure.
- b. If no procedure was selected as primary by the participant; the first procedure appearing in the procedures dataset will be selected as the primary procedure (this may, or may not, be the first procedure entered by the participant).

EXCEPTIONS TO THE ABOVE-STATED RULE:

### 1. PROCEDURE Specific Factor Rule

**If a multiple procedure operation includes any of the following procedures** (which are the procedures listed on the Data Collection Form in the section titled "PROCEDURE SPECIFIC FACTORS", exclusive of the VSD repair procedures), then that procedure will be designated as the primary procedure of the operation. In the event that two procedures from the list below are included in the same operative event, the procedure with the highest STAT Mortality Score will be designated as the primary procedure of that operation:

• 300 – TOE, AVG (AVSD) repair
