- **21 Apr**: ACSD Monthly Webinar @ 2pmCT
- **19 May**: Harvest 2 Closes OR dates through 3/31/2021
- **2 Jun**:
COVID Data – Just Released

STS News, Spring 2021 — In the past year, COVID-19 has altered or halted virtually every aspect of society, and the practice of cardiothoracic surgery has not been immune.

The abrupt cessation of surgery in mid-March 2020 had and will continue to have far-reaching implications, as the negative effects of canceled and postponed procedures emerge.

A recent, comprehensive analysis of data from the STS National Database illustrates the sharp reduction of adult cardiac surgery volumes during the first wave of the pandemic and also shows the resulting consequences on surgical outcomes.

This research—the first of its kind, according to study author Tom C. Nguyen, MD, from the University of California San Francisco—was presented during the Society’s Annual Meeting in January.
