The Honorable Roy Blunt U.S. Senate Washington, DC 20510

The Honorable Chris Collins U.S. House of Representatives Washington, DC 20515

The Honorable Jack Reed U.S. Senate Washington, DC 20510

The Honorable Joe Courtney U.S. House of Representatives Washington, DC 20515

Dear Senators Blunt and Reed and Representatives Collins and Courtney:

On behalf of organizations dedicated to improving the health and well-being of children and adolescents, we write to endorse H.R. 1859/S. 2782, the *Ensuring Children's Access to Specialty Care Act*. We see this legislation as a needed step toward curbing today's demonstrated critical shortage of pediatric medical subspecialists, pediatric surgical specialists, and pediatric mental health specialists to help provide children with timely access to the vital health services they need.

Currently, there is not only a shortage but also a significant disparity in the geographic distribution of pediatric subspecialists trained to treat children in need of specialty care, resulting in many children in underserved areas not receiving timely or appropriate health care. Children and their families often face long waiting lists to see subspecialists or must travel long distances to find needed care. According to a recent survey conducted by the Children's Hospital Association, appointment wait times for certain pediatric subspecialty care far exceed the prevailing benchmark of two-weeks in children's hospitals. The survey showed that the average time for a developmental pediatric specialist is 14.5 weeks, 8.9 weeks for neurology, and 7.5 weeks for child and adolescent psychiatry, citing just a few examples.

Shortages threaten to become more severe as fewer medical students choose careers in pediatric mental health care and pediatric subspecialties. There are three primary economic disincentives that discourage medical students from pursuing careers in pediatric subspecialties: (1) additional training beyond their primary residency training of 2-3 years on average, (2) high loan debt due to longer training; and (3) average Medicaid reimbursement that is 30 percent less than Medicare. In addition, the shortage of pediatric subspecialists is compounded both by an aging physician workforce, where the mean age of pediatric subspecialists exceeds 50 years, and by the growing number of children in the United States. In 2011, there were 73.9 million children in the United States, 1.5 million more than in 2000. This number is expected to grow to 101.6 million by 2050, increasing demand for pediatric health care services.

Timely access to pediatric specialty and subspecialty providers is essential. Longer lag times between symptom onset and treatment may not only result in poorer outcomes but also in greater

costs to patients and the health care system. H.R. 1859/S. 2782 would modify the National Health Service Corps (NHSC) loan repayment program to allow pediatric subspecialists working in underserved areas to participate. Currently, pediatric subspecialists are not eligible for this program. Your legislation correctly recognizes the serious shortages that exist in pediatric subspecialties and will give the Health Resources and Services Administration (HRSA) the ability to begin to address them in a meaningful way.

Thank you for your dedication to the health and well-being of children. We look forward to working with you to pass this important legislation.

## Sincerely,
