Mark Allen Elected STS President

Internationally recognized cardiothoracic surgeon Mark S. Allen, MD was elected by the membership yesterday evening as the Society’s 2015-2016 President.

“I am so proud and honored to be leading a group of such distinguished cardiothoracic surgeons,” said Dr. Allen, Professor of Surgery at the Mayo Clinic College of Medicine and a Consultant with the Division of General Thoracic Surgery at the Mayo Clinic. “STS is well respected among surgeons, government officials, and the public, and I look forward to making an impact on the future of our specialty.”

Born in Pittsburgh, Dr. Allen received his undergraduate degree from Allegheny College in Meadville, Penn. He studied chemistry at the State University of New York Buffalo before attending medical school at Hahnemann University in Philadelphia, where he was a member of the Alpha Omega Alpha Honor Medical Society.

Dr. Allen completed his internship and general surgery residency at Massachusetts General Hospital (MGH) in Boston before becoming chief resident for general surgery. He also completed his cardiothoracic surgery residency at MGH.

“As cardiothoracic surgeons, our commitment is to providing patients with the highest quality of care, which requires that we remain active in continuing our education and learning the newest techniques available,” said Dr. Allen.

“To keep STS at the forefront of medical education, I will spend my presidency working to promote and improve learning initiatives for not only residents and fellows, but also practicing cardiothoracic surgeons.”

During his term as President, Dr. Allen plans to expand STS e-learning activities, continue developing the STS National Database and STS Research Center, and strengthen ties with the international cardiothoracic community. He also will oversee an update of the Society’s strategic plan, an endeavor undertaken every 5 years.

“I think it is important that STS members feel they have a voice in their organization,” Dr. Allen said. “They can be—and should—involved in helping move the

Fullerton Ramps Up STS Commitment to Fight Noncommunicable Diseases

A new global health crisis is emerging in the developing world, and it is not Ebola. “In 2013, 35 million people died of noncommunicable diseases (NCDs), and 80% of those were in the developing world,” said STS President David A. Fullerton, MD.

In particular, these NCDs include diseases of the chest, such as cardiovascular disease, lung disease, and cancer, especially lung cancer.

During his Presidential Address on Monday morning, Dr. Fullerton discussed how STS is launching a new initiative to reduce the incidence of these NCDs. “Effective this meeting, Dr. Joe Dearani assumes the leadership of a special Task Force to coordinate these efforts and bring them to fruition,” he said.

“We have many friends in other specialties and industry who share this desire to make a difference. In addition to his role as President of the TSFRE, Dr. John Calhoon is playing an absolutely essential role in crystallizing these relationships,” Dr. Fullerton said.

In particular, Dr. Fullerton explained how cardiothoracic surgeons can make a profound difference, using the example of R. Morton Bolman III, MD, Ceeya Patton-Bolman, RN, and their colleagues, whose volunteer work in

STS Recognizes William Baumgartner for Leadership, Dedication

Yesterday evening, William A. Baumgartner, MD was awarded a Distinguished Service Award by STS.

The Distinguished Service Award, established in 1969, recognizes those who have made significant and far-reaching contributions to the Society and the specialty.

“Dr. Bill Baumgartner has served our specialty throughout his career and exemplifies the type of leader that we all should strive to be,” said 2014-2015 STS President David A. Fullerton, MD. “He has served not only as the leader of the preeminent program at Johns Hopkins, but also has served tirelessly as a mentor and on committees in virtually every major organization in cardiothoracic surgery.”

Dr. Baumgartner joined Johns Hopkins University in Baltimore in 1982, where he reinitiated the heart transplant program. For 17 years, he led the Division of Cardiac Surgery as the Cardiac Surgeon-in-Charge and today serves as the Vincent L. Goit Professor and Director of the Cardiac Surgical Research Laboratory.

An STS member since 1986, Dr. Baumgartner served as President of the STS Research Center, National Database and National Database and National Database National Database...
Design that Matters.
The heart is dynamic. The CoreValve frame conforms as the annulus moves to improve sealing over time.

Stop by Medtronic booth 701 to learn how the CoreValve design improves PVL.
Rwanda made it one of the very few countries in which premature cardiovascular disease–related deaths have decreased, rather than increased, in the past decades. “Our specialty is now ready to make an impact like this around the world. Today, this becomes an important core value of this organization. We stand ready to lead,” Dr. Fullerton said.

“There is clearly a great deal of work to do. I am confident we can do this together. And there’s only one way to do it,” Fullerton began. “In the words of my mother – ‘Let’s begin.’”

the organization in many capacities, including as STS President in 2002-2003 at a time when the Society became self-managed. Currently, he is the Executive Director of the American Board of Thoracic Surgery (ABTS), where he also served 6 years on the Board of Directors.

“As Executive Director of the ABTS, Bill has done a truly remarkable job of helping to guide our specialty by raising the standards for education, training, and knowledge,” said Dr. Fullerton. “Bill has had a tremendous career and, most importantly, has always served as a tremendous role model for all of us.”

Dr. Baumgartner received his undergraduate degree from Xavier University in Cincinnati, graduating Cum Laude in 1969. He received his medical degree from the University of Kentucky, where he was elected to the Alpha Omega Alpha Medical Honor Society before completing residencies in general and cardiothoracic surgery at Stanford University in California. He is the author or coauthor of nearly 300 publications, more than 60 chapters, and seven books. He is the recipient of numerous awards and honors, including the STS Earl Bakken Scientific Research Award (2008), the Thoracic Surgery Residents Association Sociates Teacher of the Year Award (2003, 2009), and the American Heart Association Council on Cardiovascular Surgery and Anesthesia Mentoring Award (2008).

He is married to Betsy Baumgartner with whom he has three accomplished children – Bill, Jr., Amy, and Mark – and he is the proud grandfather of seven grandchildren.

CoreValve® Transcatheter Aortic Valve Replacement (TAVR) Platform

INDICATIONS The CoreValve® Transcatheter Aortic Valve System is indicated for relief of aortic stenosis in symptomatic patients with severe native calcific aortic stenosis (aortic valve area ≤1.0 cm² or aortic valve area index ≤0.6 cm²/m²), a mean aortic valve gradient of ≥40 mm Hg, or a peak aortic jet velocity of 4-6 m/s and with native anatomy appropriate for the 23, 26, 29 or 31mm valve system who are judged by heart teams, including a cardiac surgeon, to be at high or greater risk for open surgical therapy (i.e., Society of Thoracic Surgeons operative risk score ≥8% or at a ≥15% risk of mortality at 30 days).

CONTRAINDICATIONS The CoreValve system is contraindicated for patients presenting with any of the following conditions: • Known hypersensitivity or contraindication to asparagine, heparin, HMPA, and polyvinylpyrrolidone, dextran, citrate, or citrate derivatives; • Active endocarditis or prosthetic valve endocarditis; • Type A or type B aortic dissection; • Perforation or valvular destruction; • Aortic regurgitation; • Aortic valve disease–related deaths have decreased, rather than increased, in the past decades. • Aortic valve disease–related deaths have decreased, rather than increased, in the past decades.

specialty forward. We need their efforts to enhance advocacy in Washington, DC, improve the education of our surgeons, and continue innovation in patient care.”

A member of STS since 1991 and a longtime volunteer, Dr. Allen most recently served as STS First Vice President. His clinical interests include esophageal surgery and pulmonary surgery. Dr. Allen lives with his wife Patricia in Rochester, Minn. The couple has two sons, Patrick and Michael.

Pedro del Nido to Give Ferguson Lecture

Pedro J. del Nido, MD, President of the American Association for Thoracic Surgery, will present the Thomas B. Ferguson Lecture on Tuesday in Ballroom 20 at 9:00 a.m. He is Chief of Cardiac Surgery and the William E. Ladd Professor of Child Surgery, Harvard Medical School, Boston. He does basic research on metabolic and structural changes in the heart in left ventricular hypertrophy.

The Annals of Thoracic Surgery Names New Editor

At the Business Meeting last night, STS membership elected innovative lung surgeon G. Alexander Patterson, MD, FRCS, as the new Editor of The Annals of Thoracic Surgery.

“I have tremendous respect for all four previous Editors who worked tirelessly over the past 50 years to make The Annals what it is today, and I’m absolutely honored and excited to take over as Editor,” said Dr. Patterson, who is the Joseph C. Bancroft Professor of Surgery at Washington University in St. Louis. “I believe The Annals can be the preeminent journal for cardiothoracic surgeons, and I look forward to leading the team that will continue to grow and improve the reputation of the journal.”

In one of his first initiatives as Editor, Dr. Patterson said he hopes to better align the activities of the journal to those of STS and, specifically, the STS National Database. “I think there are ways in which we could parlay the Database activity into feature articles or reports that would augment the science included in the journal and expand the type of information we can provide to surgeons,” said Dr. Patterson.

He also plans to increase the multimedia components of the journal, including podcasts, narrated PowerPoint slides, and interactive learning opportunities.

“STS is a leader in education and innovation in the field of cardiothoracic surgery and there is much that the journal can do to take advantage of existing resources,” said Dr. Patterson. “I believe the journal can build upon the activities of the Society and develop content that reaches beyond the scientific research that is its foundation.”

The editorial staff for The Annals will now be located at STS headquarters in Chicago. Under Immediate Past Editor L. Henry Edmunds, MD, the editorial staff was located at the University of Pennsylvania in Philadelphia.

While serving as Editor, Dr. Patterson will continue his clinical duties at Washington University, where he specializes in lung transplantation and lung surgery for cancer and emphysema. Born in Canada, he held a number of positions at the University of Toronto before moving to St. Louis in 1991. He also served as President of the Thoracic Surgery Foundation for Research and Education, the American Association for Thoracic Surgery, and the International Society for Heart and Lung Transplantation.

Dr. Patterson’s editorial experience includes 16 years with The Journal of Thoracic and Cardiovascular Surgery, including 12 years in which he served as Section Editor for General Thoracic Surgery. He also was the first Thoracic Deputy Editor of the American Journal of Transplantation, Associate Editor of The Journal of Heart and Lung Transplantation, and a member of the Transplantation Proceedings Editorial Board. He has more than 400 published research papers.

Consider Long-Term Outcomes After Aortic Dissection

A type A, or DeBakey I, aortic dissection is a catastrophic event, and historically surgeons have focused on boosting acute survival. But now that top centers achieve 85%-90% survival rates at 30 days, the focus is shifting to developing new techniques in order to improve longer-term outcomes.

STS and the European Association for Cardio-Thoracic Surgery jointly organized the session “Management of the Aortic Arch in Aortic Dissection” to highlight what may be one of the biggest issues facing cardiothoracic surgeons today, said session co-moderator Joseph E. Bavaria, MD, from the University of Pennsylvania in Philadelphia.

“We are getting more comfortable with the concept of an extended initial aortic-arch procedure to reduce late events,” said Dr. Bavaria.

Using current techniques, patients who survive the first 30 days after surgery still face a high risk from late distal aortic events in a region of the aorta that did not get repaired the first time around.

“Diagnosis and immediate surgical treatment are of paramount importance in reducing overall mortality in type A dissections,” said co-moderator Ruggero De Paulis, MD, from the European Hospital in Rome.

“Certain groups of patients will require one or more subsequent reoperations due to disease progression or another complication. Proper management of the dissected arch is a key factor in improving the surgical result. In some patients, total arch replacement is necessary, but some surgeons now propose total arch replacement for many other cases as a more radical treatment to prevent downstream complications and future reoperations,” Dr. De Paulis explained.

“There is ongoing debate whether the primary operation should be kept as simple as possible and mainly aim to save the patient’s life, or should initial surgery instead be more extensive and complex with the objective of reducing the need for reoperation later.”

The potential downside of a more complex primary operation is that it might result in higher operative mortality.

“During this session, the speakers will discuss the various surgical options available today, ranging from standard ascending-aorta replacement with a hemi-arch procedure to hybrid solutions and the use of new vascular prostheses that might help simplify more radical treatment of the disease,” Dr. De Paulis said.

“Attendees will learn about selecting the strategy that best suits the different clinical and anatomical presentations they might face in daily practice.”

Joint STS-ESTS Session to Focus on Controversies

STS and the European Society of Thoracic Surgeons have collaborated this year to provide the North American and European perspectives on four interesting and sometimes controversial topics in general thoracic surgery.

The surgical management of malignant mesothelioma, computed tomography screening for lung cancer, credentialing surgeons in new technologies and procedures, and the role of robotics in the surgical management of lung and esophageal malignancies will be addressed during the Tuesday afternoon session, which will be co-moderated by Sean C. Grondin, MD, MPH, of Calgary, Canada, and Dirk E.M. Van Raemdonck, MD, of Leuven, Belgium.

For each topic, one speaker will provide the European perspective, and another will present the North American perspective.

Following each set of topic presentations, a panel discussion – including a question and answer session – “will highlight some of the different perspectives for each of these particular controversies and how they are managed in each of these two continents,” Dr. Grondin said.

“The importance of this joint STS-ESTS session is that we can compare current practice for novel and sometimes controversial thoracic procedures between North America and Europe. It will be interesting to hear the differences or similarities,” Dr. Van Raemdonck added.

Attend Tuesday’s Ethics Debate

Richard G. Ohye, MD (PRO) and James Jaggers, MD (CON) will debate the timely question, “Must Surgeons in Training Programs Allow Residents to Operate on Their Patients to Satisfy Board Requirements?” from 12:00 p.m. to 1:00 p.m. in Room 30E.
Stereotactic body radiation therapy, or SBRT, is increasingly used for the treatment of early lung cancer, but the therapy remains controversial, and the appropriate role of surgeons in its delivery remains unclear, according to Stephen Hazelrigg, MD.

On Tuesday afternoon during a new session titled “Role of SBRT in Lung Cancer Treatment,” a panel of experts will present the latest information on the therapy, including information on how surgeons can get involved with an SBRT program, said Dr. Hazelrigg of Southern Illinois University, Springfield, who will co-moderate the session with Neil A. Christie, MD, of the University of Pittsburgh Medical Center (UPMC).

The session will begin with a review of contemporary results with SBRT by Robert Timmerman, MD, a radiation therapist from Dallas who will provide “the latest information from the SBRT camps” with respect to outcomes, Dr. Hazelrigg said.

Next, Traves Crabtree, MD, of St. Louis, will provide the latest data on surgery for early stage lung cancer for comparison with outcomes in patients who undergo SBRT.

A discussion of the role of minimally invasive treatments other than SBRT for lung cancer by Hiran C. Fernando, MD, of Boston, will follow.

“We’re trying here to figure out the best way to incorporate SBRT and when it should be used, especially in early lung cancers. There’s a lot of debate about when we should use it and whether surgery should be done. There’s not much controversy in late stage lung cancer or very old patients, but the question is more in early stage patients who could be treated surgically,” Dr. Hazelrigg said.

Dr. Christie will discuss his own experience with successfully integrating SBRT and other ablative techniques into a surgery practice.

At some centers, patients are evaluated by both surgeons and radiation therapists in a multidisciplinary conference to determine the best route, while at others, patients are referred to one or the other, and surgeons may have no involvement at all, he said.

The topic is important because this is a very new technology, and there are a lot of questions and concern about SBRT being overused without adequate data.

The session will close with a roundtable discussion on the future role of SBRT in early stage lung cancer.

Attendees can expect to gain an improved understanding of SBRT and of practical considerations for starting an SBRT program with surgeon involvement or becoming involved with an existing program. “I’m hoping we will understand much better what data are out there to help make the best decisions for our patients,” Dr. Hazelrigg said.

Role of SBRT in Lung Cancer Treatment

Every Patient Has A Place In Our Hearts
Edwards Lifesciences is proud to present Patient Day 2015, a day-long event where recipients of Edwards’ heart valve technology come together and connect with one another.

At Patient Day 2015, guests will meet the people who made their specific device, hear from patient advocates and learn about programs supporting the heart valve community.

If you have a patient who has benefited from Edwards’ heart valve technology, we invite you to share information with them about this event. This information can be found at Edwards.com/PatientDay.

Presenters Meet the Media in STS Press Conferences
The Society will host four press conferences on Tuesday highlighting some of the ground-breaking research being presented at the STS 51st Annual Meeting.

The press conferences will take place in Show Office E at 10:00 a.m.

Clinical Feasibility Trial for the Branched Endovascular Treatment of the Distal Aortic Arch
Speaker: Himanshu J. Patel, University of Michigan Medical Center, Ann Arbor

Pressurized Cadaver Model in Cardiothoracic Surgical Simulation
Speaker: Christina L. Greene, Keck School of Medicine of the University of Southern California, Los Angeles

Red Blood Cell Transfusions Impact Pneumonia Rates After Coronary Artery Bypass Grafting Surgery
Speaker: Donald S. Likosky, University of Michigan Health System, Ann Arbor

Using 3D Printing Technology as a Tool for Tracheal Tissue Engineering
Speaker: Todd Goldstein, North Shore-LIJ Health System, Manhasset, N.Y.
Assessing 40 Years of Transplants

While the risk profile of pediatric heart transplant patients at Stanford University has increased over time, long-term survival has improved significantly and consistently, according to findings from a review of 338 cases over 40 years. These findings will be presented Tuesday afternoon by Olaf Reinhartz, MD.

The cases included in the study – all pediatric heart transplants at Stanford between 1974 and 2014 – were grouped by era, including 98 transplants performed during the first 20 years, 91 performed during the subsequent 10 years, and 149 performed during the most recent 10 years. Follow-up was a remarkable 100%, and the average age at the time of diagnosis for each era, respectively, was 9.9, 12.1, and 6.9 years. The percentage of transplants performed in infants was 20%, 7%, and 17%, respectively, Dr. Reinhartz said.

End-stage congenital heart disease (versus cardiomyopathy) was the indication in 31%, 25%, and 44% of cases in the three eras, respectively. Patients transplanted from mechanical support increased from 1% in era 1 to 14% and 31% in eras 2 and 3, respectively. Survival was significantly improved in each era, as compared with the prior era.

Dr. Reinhartz noted that the complexity of pediatric heart transplantation and the profile of pediatric transplant candidates have changed dramatically over time due to three main factors. First, infant transplants became successful. Second, palliation of congenital heart disease, particularly single ventricle disease, became successful, leading to larger numbers of survivors from congenital heart surgery (registry data indicate that 40% of pediatric heart transplantations in North America are performed for congenital heart disease). Finally, the shift from extracorporeal membrane oxygenation toward durable ventricular assist devices has led to about a third of pediatric patients now being mechanically bridged to transplant, he said.

Noncardiac Surgery Outcomes Improve With Resident Participation

When residents were involved in noncardiac thoracic procedures, outcomes improved, according to a study, “The Impact of Thoracic Residents on Surgical Outcomes and Failure to Rescue Patients Having Noncardiac Thoracic Operations,” to be presented by Victor A. Ferraris, MD, of the University of Kentucky Chandler Medical Center, Lexington, on Tuesday afternoon.

Dr. Ferraris and his colleagues evaluated outcomes in 22,168 patients from the American College of Surgeons-National Surgical Quality Improvement Program (ACS-NSQIP) database who had noncardiac thoracic operations – including esophageal and pulmonary resections – for whom adequate information was available.

They compared noncardiac thoracic operations to other nonthoracic specialty procedures in the database, and compared resident outcomes to attending-only outcomes in noncardiac thoracic procedures.

Serious postoperative complications occurred in 6,157 patients (28%), and 655 of those patients (3.0%) died. Logistic regression analysis showed that surgical resident involvement significantly improved failure-to-rescue rates (odds ratio, 0.85). Importantly, overall mortality decreased significantly with resident involvement in noncardiac thoracic operations (odds ratio, 0.76).

Notably, other nonthoracic specialties saw greater morbidity, mortality, failure to rescue, and resource utilization with resident-related procedures, compared with procedures performed by cardiothoracic surgeons, Dr. Ferraris said.

“The distinctive feature of the noncardiac thoracic procedures evaluated for this study was involvement of senior level residents; residents in postgraduate year 6, 7, or greater than 7 were involved in more than half of the procedures, whereas junior residents participated in the majority of other nonthoracic subspecialty procedures,” he noted, suggesting that the presence of senior level residents was a key discriminating factor in the improved outcomes.

“We speculate that teaching programs provide infrastructure, including vigilant postoperative care, and the involvement of senior level residents facilitates treatment of serious postoperative complications and potentially salvages lives after complicated operations. There seems to be no substitute for experienced resident involvement,” Dr. Ferraris said.

Future trends in resident-related outcomes need to be tracked, he added.

Are LVAD Problems Increasing?

While some studies have reported an increased prevalence and earlier onset of left ventricular assist device (LVAD) pump thrombosis and pump exchanges, it’s been unclear whether all centers experience this, said Fenton McCarthy, MD, a thoracic surgery resident at the Hospital of the University of Pennsylvania in Philadelphia. During a Tuesday presentation on techniques to improve long-term mechanical circulatory support devices, Dr. McCarthy will discuss research using data for all 3,166 US Medicare patients with an LVAD implanted between January 1, 2009, and December 31, 2012.

“What we found was that pump exchanges remain rare, and overall survival for the entire cohort remained unchanged,” Dr. McCarthy said. “But if the LVAD was implanted after March 2011, there was a two- to three-fold higher rate of pump exchange, and if patients had that procedure, they were at increased risk for mortality compared to those who did not have it.

We know that more devices are being implanted every year, so is the increase in exchanges just because more people are getting devices or an indicator of another trend?” Dr. McCarthy asked.

“The overall trend in the data suggests that LVAD pump exchanges are occurring more frequently throughout the nation,” said senior study author Nimesh D. Desai, MD, director of the Thoracic Aortic Surgery Research Program at Penn. “While it is impossible to determine the exact causes from administrative data sources, changes in patient characteristics, anticoagulation protocols, and VAD design may potentially be involved.”

Strategies to Improve Outcomes With Long-term Mechanical Circulatory Support Devices

Tuesday, 1:00 p.m. – 3:00 p.m.

Room 30E
What you do today, matters for their tomorrows.

A single-ply bioscaffold that remains functional, durable and free from calcification for all your tissue needs.

Please visit booth #433 to experience the CardioCel® difference.

CardioCel is a registered trademark of Admedus Ltd.
STS University will provide attendees with hands-on experience in cardiothoracic procedures. Lecture materials are available online at www.sts.org/annualmeeting. The following wet labs will be held on Wednesday, January 28, from 7:00 a.m. to 9:00 a.m. and repeated from 9:30 a.m. to 11:30 a.m.

Course 1: TAVR/TEVAR, Guidewires, and Sheaths
Michael P. Fischbein, Stanford, Calif., and Wilson Y. Szeto, Philadelphia, Pa. This course will introduce attendees to wires, catheters, and novel endovascular techniques for the treatment of aortic stenosis and thoracic aortic disease. The hands-on experience will provide participants with the opportunity to either practice or observe an expert perform procedures utilizing the latest technology, including transfemoral, direct aortic, left subclavian, and transapical TAVR, as well as all aspects of TEVAR.

Course 2: Mitral Valve Repair
Gorav Ailawadi, Charlottesville, Va., and Harold Roberts Jr., Aventura, Fla. Participants will practice advanced mitral valve repair guided by international leaders in advanced open and minimally invasive/robotic repair. The objective is to guide participants in performing mitral valve surgery for a broad range of pathologies.

Course 3: Valve-Sparing Aortic Root Replacement
Duke E. Cameron, Baltimore, Md., and Edward Chen, Atlanta, Ga. This course will provide interactive, hands-on instruction on the surgical techniques and critical steps necessary for performing a successful valve-sparing aortic root replacement.

Course 4: Aortic Root Enlarging Procedures
John W. Brown, Indianapolis, Ind., and S. Aadh Husain, San Antonio, Tex. Surgical aortic root enlarging procedures addressed will include Nicks, Manougan, Mavroudis, Ross Konno, upsizing the aortic root-Bentall type procedure, and myectomy/myotomy techniques.

Course 5: ICU/ECHO
Haney Mallemat, Baltimore, Md., and Glenn J.R. Whitman, Baltimore, Md. This course will review the utilization of a focused ultrasound examination of the heart and major vessels, such as the aorta and IVC.

Course 6: Long-Term Circulatory/Respiratory Support
Askish Shah, Baltimore, Md., and Scott C. Silvestry, St. Louis, Mo. Faculty will demonstrate techniques for short- and long-term cardiac and pulmonary support with an emphasis on longer-term support. Basic and advanced implantation LVAD techniques, management options, and surgical decision making at the time of implant will be taught by leaders in the field.

Course 7: Advanced Endotracheobronchial Procedures
Rafael Andrade, Minneapolis, Minn., and Moishe A. Liberman, Montreal, Canada. Endobronchial ultrasound and endoscopic ultrasound have attained firm places in the endoscopic diagnostic and staging armamentarium of mediastinal lymph nodes. Electromagnetic navigation bronchoscopy is an interesting technology aimed at facilitating the endoscopic biopsy of peripheral lung lesions.

Course 8: VATS Lobectomy
Shanda H. Blackmon, Rochester, Minn., and Shari L. Meyerson, Chicago, Ill. The course will review the indications, patient selection, technical steps, and recent advances in of video-assisted thoracoscopic surgical (VATS) lobectomy. This session is dedicated to hands-on training utilizing porcine heart-lung blocks for course participants to perform a VATS left upper lobectomy. Stations include multiple instrument and energy device options.

Course 9: Advanced Esophageal and Tracheal Procedures
Siddarta P. Gangadharam, Boston, Mass., and Thomas K. Varghese Jr., Seattle, Wash. Participants will be introduced to several techniques for airway and esophageal reconstruction with emphasis on the different technical aspects (“pearls”) of the anastomosis from content experts. The course will provide a hands-on experience for two tracheobronchial techniques – tracheal sleeve anastomosis and tracheobronchoplasty – and two esophageal anastomotic techniques – hybrid linear stapled anastomosis and hand-sewn anastomosis.

Course 10: Atrial Switch, Double Switch, The Mustard and the Senning
Sitaram M. Emani, Boston, Mass., and John E. Mayer Jr., Boston, Mass. Learn how to perform this essential part of a double switch. Patients who undergo atrial switch procedures and survive to adulthood may present with complications from their repair. It is essential for today’s surgeon to be facile with yesterday’s techniques.

Attend Tech Demos at the TECHbar
An exciting new amenity at the 2015 Annual Meeting is the TECHbar, which is located in the Exhibit Hall. Stop by for answers to all of your technical questions – three experts can help you with both personal and professional tasks, such as downloading and using the STS Annual Meeting Mobile App, troubleshooting issues with your smartphone or tablet, and more. You can also attend these free educational sessions on various technology topics of interest:

Tuesday, January 27
10:15 a.m. – 10:45 a.m. Tech and Solutions: Note Taking and Data Capturing – Speech and Handwriting Recognition
Are you still taking notes with pen and paper? TECHbar experts will help you change that. They’ll share some options for note taking on your mobile devices with speech and handwriting recognition features.

12:00 p.m. – 12:30 p.m. Productivity Apps for Teams and Office Environment
Apps don’t always mean fun and games. Many apps can help transform you and your team’s productivity. TECHbar experts will provide an overview of these apps and how they can help you and your team.

12:30 p.m. – 1:00 p.m. Presentations for Education – Tools and Techniques
Ensure that your audience is engaged and taking away the knowledge they need. TECHbar experts will share presentation tools and techniques that will enhance your next educational talk.
Preop Radiation No Benefit Over Chemo Alone

Preoperative chemotherapy (CT) alone or combined chemoradiation (CXRT) had no significant effect on morbidity or survival in patients with locally advanced esophageal adenocarcinoma, according to Jonathan Spicer, MD, of the MD Anderson Cancer Center, Houston, and his colleagues. Their database study of 214 patients with cT3N+ adenocarcinoma (114 with preoperative CT, 100 with CXRT) found no significant differences in major postoperative morbidity between both groups. Mortality at 90 days was 5.3% for CT versus 4% for CXRT. Median longer-term survival was also not significantly different between CT (31 months) and CXRT (39 months).

"Since most patients die from metastatic disease, the added value of radiation for local control is suspect. Greater efforts need to be directed towards improved systemic therapies. Our study suggests that an appropriate North American randomized clinical trial comparing preop CXRT and CT in locally advanced esophageal adenocarcinoma and followed by en-bloc esophagectomy is needed," Dr. Spicer stated.

Annual Meeting Exhibitors

3si Surgical Safety Solutions 634
Burlington, MA
3si markets a speech recognition-driven software solution that resides in the OR to track the surgical team’s procedural workflow. It has an embedded electronic checklist that extends from preoperative to postoperative phases and alerts the team when activities are missed. Use of the 3si HUB improves situational awareness, promotes effective communication, and encourages better teamwork.

A&E Medical Corporation 922
Durham, NC
A&E Medical’s products include MYO/Wire® temporary pacing wires, MYO/Wire II sternum wires, MYO/Punch rotating surgical punch, MYO/Lead disposable patient cable, and DoubleWire high-strength sternal closure system.

Abbott Vascular 427
Santa Clara, CA
Abbott (NYSE: ABT) is a global health care company devoted to improving life through the development of products and technologies that span the breadth of health care. With a portfolio of leading, science-based offerings in diabetes, cardiac care, nutritionals, and branded generic pharmaceuticals, Abbott serves people in more than 130 countries and employs approximately 70,000 people.

ACUTE Innovations 221
Hillsboro, OR
Furthering its reputation as a leader in the thoracic industry, ACUTE Innovations® continues to make advancements in chest wall stabilization technology. Stop by booth 221 to learn about ACUTE’s cutting-edge products: RibLoc™ U Plus Chest Wall Plating System and AcuTi™ II Sternum Closure System.

Admedus 433
Minneapolis, MN
Admedus, a global health care group, is working with renowned medical leaders to bring new medical technologies to market. CardiCel®, a cardiovascular scaffold, is the first of its ADAPT® tissue-engineered bioimplants and is being used by surgeons to repair simple and complex cardiac defects.

Aesculap 926
Center Valley, PA
Aesculap Inc., a member of the B. Braun family of health care companies, is the world’s largest manufacturer of surgical instrumentation. For more than 138 years, Aesculap has provided surgeons with surgical instrumentation for ENT, plastic and reconstructive, thoracic, microvascular, cardiovascular, and laparoscopic surgery.

American Association for Thoracic Surgery 414
Beverly, MA
Founded in 1917, the American Association for Thoracic Surgery is dedicated to excellence in research, education, and innovation in cardiothoracic surgery and has become an international professional organization of more than 1,300 of the world’s foremost cardiothoracic surgeons. www.aats.org

ATMOS 735
Allentown, PA
ATMOS offers the finest quality, patient-friendly devices that empower medical professionals to provide the best possible quality of care. The ATMOS philosophy, combined with ambitious and team-oriented employees, continues to facilitate the company’s continued success. “For a better life.”

AtriCure Inc. 815
West Chester, OH
AtriCure is intent on reducing the global Afib epidemic and healing the lives of those affected through clinical science, education, and innovation. The company is a leading Afib solutions partner, with the only FDA-approved surgical treatment for Afib and the most widely implanted occlusion device for left atrial appendage management.

The information listed here is accurate as of January 9, 2015. The information for these products and services was provided by the exhibitors, and inclusion in this publication should not be construed as a product endorsement by STS.

First-time exhibitors are highlighted in yellow. Exhibitors highlighted in blue are advertisers of The STS Meeting Bulletin. A yellow and blue shaded company is both.

ventricular assist devices for patients of every age and body size. EXCOR® Pediatric provides medium- to long-term circulatory support specifically for infants and children awaiting heart transplants. EXCOR Pediatric is approved for use in the United States under Humanitarian Device Exemption regulations by the FDA.

BFW Inc. 522
Louisville, KY
BFW understands the medical profession’s demands like no other. With more than 40 years of experience, the company strives to be a technological pioneer. Its latest innovations are the next generation of dynamic surgical and examination illumination systems that revolutionize the global medical community’s understanding about lighting solutions.

Bio-Gate USA 1608
Buena Park, CA
Bio-Gate USA, Inc. is the exclusive distributor for Xenox products, such as the lightweight surgical telescope, small and bright medical LED headlight system, and camera system. The company has been located in Southern California since 1999.

Biomed Simulation Inc. 409
Poway, CA
Biomed Simulation Inc. supplies patient simulators for surgical and critical care applications. Biomed’s flagship simulator, “Califia,” connects directly to an HL7 or ECOM machine providing realistic patient responses. Its programmability and integration with a wide range of monitors allow the delivery of consistent, robust clinical scenarios.

Bomet Microfexion 826
Jacksonville, FL
Bomet Microfexion is a leading global healthcare provider of thoracic products. The company’s thoracic portfolio includes the Pectus Bar for repair of pectus excavatum and the SternalLock Blu Primary Closure System for sternal closure. The Blu System aligns and stabilizes the sternum after sternotomy and enables easier closure after minimally invasive access.

Bolton Medical 933
Sunrise, FL
Bolton Medical is a subsidiary of the Werfen Life Group, an international company that manufactures and distributes medical diagnostic solutions and medical devices worldwide. Bolton sells endovascular therapies, such as the Relay Thoracic Stent-Graft, in both US and international markets and Relay RBS in international markets.

Bryan Corporation 1137
Woburn, MA

CardiacAssist, Inc. 1602
Pittsburgh, PA
CardiacAssist, inventor of the TandemHeart® Extracorporeal Circulatory Support System, offers versatile mechanical circulatory support treatment options. While the company is best known for its Left Ventricular Support platform, it recently launched a line of arterial cannula and the PROTEK Duo™ Veno-Venous dual lumen cannula. Stop by booth #1602 to learn more.

Cardiomedical GmbH 306
Langenhagen, Germany

CareFusion 727
San Diego, CA
CareFusion is a global corporation helping clinicians and hospitals measurably improve patient care. The Flox® Catheter System allows patients to manage symptoms associated with recurrent pleural effusions and malignant ascites at home, reducing the length of stay and cost of care while improving quality of life. Visit CareFusion at booth #727 to learn more.

Castle Biosciences 832
Greensboro, NC

Chase Medical 1236
Richardson, TX
Chase Medical is dedicated to cardiology by delivering a full line of ventricular stabilization products for off-pump procedures. Chase also manufactures and distributes the unique SVR product used in ventricular restoration, as well as the Triumph Cannula, a minimally invasive aortic exclusion device.

ClearFlow 636
Anaheim, CA
The PlieneFlow® Active Cleanse Technology™ System offers a safe way to proactively maintain chest tube patency, minimizing complications from ineffective evacuation of blood after surgery. Results from a recent prospective clinical trial showed a 42% decrease in reinterventions and a 30% decrease in postoperative atrial fibrillation with the PlieneFlow ACT.

Convatec 934
Bridgeport, WA
Convatec is a leading developer and marketer of innovative medical technologies, including AQUACEL® Ag SURGICAL® cover dressing. As the only cover dressing to incorporate a unique patented Hydrofiber® technology, it helps improve outcomes by locking in fluid, including harmful bacteria, and releasing ionic silver to help reduce the risk of infection.

Cook Medical 1133
Bloomington, IN
Founded in 1963, Cook Medical pioneered many of the medical devices now commonly used to perform minimally invasive medical procedures throughout the body. Today, the company integrates medical devices, drugs, and biologic grafts to enhance patient safety and improve clinical outcomes. Since its inception, Cook has operated as a family-held private corporation.

CorMatrix 527
Roswell, GA
CorMatrix® Cardiovascular markets its ECM® Bioscaffold devices for vascular repair, pericardial repair and reconstruction, cardiac tissue repair, and ConGaro ECM Envelope. The company is currently conducting preclinical studies to evaluate other cardiac and vascular applications.

Covidien 1311
New Haven, CT
Covidien is a leading global health care products company that creates innovative medical solutions for better patient outcomes and delivers value through clinical leadership and excellence. Please visit www.covidien.com/surgical to learn more.

CryoLife 511
Kennesaw, GA
CryoLife is a leader in the development and implementation of advanced technologies associated with allograft processing and cryopreservation. CryoLife also pioneers research in the development of implantable biological devices, surgical adhesives, hemostatic agents, and biomaterials for cardiac, vascular, and general surgery.

CT Assist 313
Philippi, WV

CTSNet 410
Chicago, IL
CTSNet (www.ctsnet.org), headquartered in Chicago, is the leading international source of online resources related to cardiovascular surgery, as well as the major hub of the international online community of cardiovascular surgeons and allied health care professionals.

Davol Inc. 1321
Warwick, RI
Davol, a BARD company, is the market leader in comprehensive soft tissue reconstruction. In addition to this extensive suite of products, the company’s BioSurgery franchise delivers a growing line of enhanced sealants and hemostatic products to complement surgical techniques across thoracic, cardiovascular, and other surgical specialties.

Designs for Vision 520
Ronkonkoma, NY
Just See It™ with Designs for Vision’s lightweight custom-madesurgical telescopes—now available with Nike® frames. See It Even Better™ with the L.E.D. Daylite® or Twin Beam®, providing the brightest and safest unwthetered illumination. Introducing the L.E.D. Daylite® Nano Cam HD—document procedure and HD video from your perspective.

DGM / Global Intercepts 405
Dumont, NJ
Utilizing relationships with health care providers all over the world, DGM / Global Intercepts provides insights on markets, technologies, and devices. The company is uniquely qualified to evaluate marketing strategies, as well as test product development directions, device concepts, product positioning, messaging, and brand identity. Research studies are initiated before, during, and after any United States or international conference.

Dilon Technologies 315
Newport, VA
Dilon Technologies Inc. manufactures the Navigator gamma positioning system with Daniel Lung Probe. The Daniel Probe addresses the challenges of targeting and positioning in the OR—no need to be tethered to fiber optic cables. The products feature extra-long battery life and are lightweight for long-lasting comfort.

Domain Surgical 300
Salt Lake City, UT
Domain Surgical’s FXM Ferromagnetic Surgical System is an advanced thermal energy surgical platform that uses ferromagnetic technology to cut, coagulate, and seal tissue. A variety of surgical tools have been designed to bring the unique clinical benefits of this technology to a broad array of surgical subspecialties.

Dornier MedTech America, Inc. 1232
Kennesaw, GA
Dornier MedTech is committed to providing innovative solutions for a variety of health care fields worldwide and revolutionizes spider and varicose vein treatments by offering multifunctional, state-of-the-art, high performance laser devices.

EDB 1521
Tokyo, Japan
EDB, a biomedical spin-out venture company from Japan, provides the original beating heart simulator and quantitative assessment system for off pump coronary artery bypass and vascular anastomosis worldwide. Skill assessment is based on rapid CFD technology and validated silicone vascular model.

Edwards Lifesciences 901
Irvine, CA
Edwards Lifesciences is the global leader in the science of heart valves and hemodynamic monitoring. Driven by a passion to help patients, the company partners with clinicians to develop innovative technologies in the areas of structural heart disease and critical care monitoring, enabling them to save and enhance lives.

Elsevier 1327
Philadelphia, PA
Elsevier is the proud publisher of The Annals of Thoracic Surgery and a world-leading provider of information solutions that enhance the performance of science, health, and technology professionals. Elsevier empowers better decision making and the delivery of better care. www.us.elsevierhealth.com

Enova Illumination 1415
St. Paul, MN
Enova Illumination manufactures the brightest and most adjustable LED surgical headlights that allow complete mobility in the OR—no need to be tethered to fiber optic cables. The products feature extra-long battery life and are lightweight for long-lasting comfort.

Essential Pharmaceuticals 1505
Ewing, NJ
Essential Pharmaceuticals is a specialty pharmaceutical company devoted to the development and sales of branded pharmaceutical products in the transplant/ cardiovascular surgery fields, including Custodial® HTR. Please visit booth #1505 and www.custodial.com.

ETHICON/DePuy Synthes CMF 301
Cincinnati, OH
Ethicon US LLC, a Johnson & Johnson company, commercializes a broad range of innovative surgical products, solutions, and technologies used to treat some of today’s most prevalent medical issues, such as colorectal and thoracic conditions, women’s health conditions, hernias, cancer, and obesity. Learn more at www.ethicon.com or follow Ethicon on Twitter @Ethicon.
European Association for Cardio-Thoracic Surgery (EACTS) 420
Windsor, United Kingdom
EACTS is the largest international general thoracic surgery organization with more than 1,400 members from all continents. The society’s mission is to improve quality in the specialty, from the clinical and surgical management of patients to education, training, and credentialing of thoracic surgeons worldwide.

Fehling Surgical 1027
Acox, WA
Fehling Surgical features the CERAMO® Instrument Line, SUPERPLAST Probes, and new, innovative retractor systems for minimally invasive cardiac surgery. The CERAMO® surface means high efficiency through enhanced performance, increased endurance, and minimal maintenance.

General Cardiac Tech/Heart Hugger 535
San Jose, CA
Heart Hugger-Sternum Support Harness is a patient-operated support harness applied postoperatively to splint surgical wounds. Benefits include improved patient compliance, faster return to prehospital respiratory levels, fewer wound complications, and better postoperative mobility. It is useful for post open-heart, thoracotomy, fractured rib, and other chest trauma patients.

Genesee BioMedical 827
Denton, CO
Design Beyond Standard. Genesee BioMedical, Inc. provides unique devices for cardiothoracic surgery, including sternal/thoracic valve retractors, instruments for minimally invasive cardiac surgery, coronary graft markers, suture guards, retraction clips, and myocardial needles. All products are CE approved. www.geneseebiomedical.com

Gore & Associates 1127
Flagstaff, AZ
The Gore Medical Products Division has provided creative solutions to medical problems for three decades. Over 35 million Gore medical devices have been implanted worldwide. Products include vascular grafts, endovascular and interventional devices, surgical materials, and sutures for use in vascular, cardiac, and general surgery. For more information, visit www.goremedical.com.

Hawaiian Moon 1122
Clearwater, FL
Say goodbye to dry skin with Hawaiian Moon Organic Aloe Cream.

Heart Valve Society (HVS) 1234
Beverly, MA
For the first time, a truly collaborative international valve society, comprised of cardiologists, cardiac surgeons, and researchers, is coming together to create this new organization of unprecedented depth. The Heart Valve Society (HVS) website is www.HeartValveSociety.org.

HeartWare 519
Framingham, MA
HeartWare is dedicated to delivering safe, high-performing, transformative therapies that enable patients with heart failure to get back to life. The HVAD® Pump is designed to be implanted in the percutaneous space, avoiding the more invasive surgical procedures required with older LVAD technologies. The HVAD Pump is commercially available around the world.

Hospital Corporation of America 329
Fort Lauderdale, FL
HCA affiliated facilities in East Florida are a part of a quality health care network in East Florida and the Treasure Coast with 14 affiliated hospitals, 12 surgery centers, one integrated regional lab, and one consolidated service center. Together, the network employs more than 12,500 individuals and has close to 6,000 physicians on staff.

ImaCor, Inc. 327
Garden City, NY
ImaCor develops advanced critical care solutions for hemodynamic assessment. hTEE™ (hemodynamic Transesophageal echocardiogram) (TEE) is the first and only technology to provide continuously available direct cardiac visualization. hTEE is enabled through the 72-hour ClairTEE™ probe, a miniaturized and disposable TEE probe, and the Zura™ Imaging Systems for episodic assessment.

International Society for Minimally Invasive Cardiothoracic Surgery (ISMICS) 412
Beverly, MA
ISMICS: Innovation, technologies, and techniques in cardiothoracic and cardiovascular/surgical vascular surgery. 2015 ISMICS Annual Scientific Meeting, 3-6 June 2015, InterContinental Hotel, Berlin, Germany. www.ismics.org

Intuitive Surgical 1101
Sunnyvale, CA
Intuitive Surgical, Inc. designs, manufactures, and distributes the da Vinci® Surgical System, technology designed to allow surgeons to perform many complex procedures minimally invasively.

IsoRay Medical 729
Richland, WA
IsoRay Medical manufactures and distributes radiation therapy sources for direct implantation into cancer or surgical margins following resection of cancer. IsoRay markets Centream-131 brachytherapy meshes and strands for resection line treatment following surgery for high-risk lung cancers, resulting in highly conformal adjuvant radiation therapy that spares critical thoracic structures.

JACE Medical 837
Warsaw, IN
JACE is a medical device development company pioneering a fully integrated reengineering technology and application for sternal resection and closure. The company innovates with an eye toward providing definitive benefits across the entire five-sided health care spectrum of patient, physician, provider, payer, and regulator. Visit the JACE booth and see how the company thinks outside the paradigm. www.JACEMed.com

JOMDD 1033
Tokyo, Japan
JOMDD is engaged in the medical device incubation business, leveraging untapped technologies originating from Japan. The company operates as a new technology sourcing engine, currently developing multiple medical devices with high potential and uniqueness, and is looking for potential partnerships with medical device manufacturers to expand its products globally.

KaMedi Co. Ltd. 1510
Hua Hin, Thailand
SternaSafe is an active sternum support band.

Kapp Surgical 1032
Cleveland, OH
Kapp Surgical designs surgical instruments and implants, manufactures them, and sells them, as well as distributes domestically and internationally. Kapp’s exclusive products are the Cosgrove Heart Retractor, Strip Y’s surgical organizer, and countless surgical devices, all FDA-approved with several pending approval.

Karl Storz 1226
El Segundo, CA
Karl Storz offers solutions for thoracic surgery, including slender, easily dismantled MediSAXT instruments that offer economic solutions for mediastinoscopy. The company’s EnSacaMedeleon® Telescope allows the surgeon to adjust the viewing direction from 0° to 120° throughout procedures without changing telescopes.

KL Martin 1421
Jacksonville, FL
KL Martin, a responsive company, is focused on the development of innovative products for oral, plastic, and cranio-maxillofacial surgery. New product developments in the company’s titanium osteosynthesis plating systems allow these products to be used for rapid sternal fixation and reconstruction.

Koros USA, Inc. 722
Moorpark, CA
For the past 30 years, Koros USA, Inc. has been designing and distributing state-of-the-art surgical instruments, like the Cervical Black Belt, Lambert Super Shule, and ALLIF Polaris Lateral Retractors, along with the Rotating Osteo Punch, Ejector Punch Rongeurs, and many more fine hand instruments.

LifeNet Health 1426
Virginia Beach, VA
LifeNet Health helps save lives and restore health for thousands of patients each year. It is the world’s most trusted provider of transplant solutions, from organ procurement to new innovations in bioprosthetic technologies and cellular therapies—a leader in the field of regenerative medicine, while always honoring the donors and health care professionals who allow the healing process.

Lippincott Williams & Wilkins 1037
La Mesa, CA
LoupCam® is the market leader in head-mounted HD surgical cameras and is the-only company offering cross platform (Mac, Windows, and iOS and Android compatibility). The company offers five different magnification lenses to match all surgical points of view along with a Bluetooth foot pedal, which allows for hands-free control of the camera.

MAQUS 633
Wayne, NJ
MAQUS Medical Systems is a market leader focused on improving patient care and quality of life. The company offers a comprehensive portfolio of innovative products designed to meet the needs of clinical professionals in the areas of advanced hemodynamic monitoring, cardiothoracic and vascular surgery, thoracic drainage, cardiac intervention, perfusion, anesthesia, and ventilation.

Market Access Partners 311
Evergreen, CO
Market Access Partners provides market research consulting to the medical device and pharmaceutical industries. The company uses innovative, qualitative methodologies to research preferences of physicians, nurses, and patients. Market Access Partners offers a management-oriented approach to product development and marketing.

Mayo Clinic 312
Jacksonville, FL
Mayo Clinic has been recognized as the best hospital in the nation for 2014-2015 by U.S. News and World Report and one of the top 100 “Best Companies to Work For” by FORTUNE. Mayo Clinic is the largest integrated, not-for-profit medical group practice in the world working in a unique environment that brings together the best in patient care, groundbreaking research, and innovative medical education.

Wexler
Houston, TX

Worldwide Design
Seattle, WA
Evolutionary Experience

Make your ideal Hybrid OR a reality

Maquet, dedicated to healthcare innovation for more than 175 years, partners with hospitals like yours to produce Hybrid OR solutions that enhance workflows and help promote optimal patient treatment.

Our experienced team collaborates with your key stakeholders to discuss, design, deliver, and service a flexible operating suite that enables your staff to perform diagnostic and interventional procedures as well as open surgery—all in a single, efficient work environment.

By analyzing and optimizing circulating pathways, collision points, ergonomics and workflow, Maquet Hybrid ORs help promote maximum efficiencies within the surgical suite so that your investment will continue to be an asset today, and adapt to your future.

If your goal is an integrated solution that easily adapts to address the needs of a truly multi-functional OR, contact Maquet today.

At STS 2015, Visit Maquet Booth #633

www.maquetusa.com

MAQUET USA will donate $250 to Make-A-Wish® for any single purchase order of $50,000 or more (before tax, shipping and install) received between March 1, 2014 and February 28, 2015, with a minimum guaranteed contribution of $50,000, up to a maximum of $150,000. For more information about Make-A-Wish visit wish.org.
