

Single Center Experience in Latin America with HeartMate II and III Left Ventricular Assist Devices

Antonio Figueredo Moreno, MD, MBA
Cardiac Surgeon
Fundación Cardiovascular de Colombia

Patients Data

All patients with BMI (kg/m^2) in Normal Rank: mean 22 (19-25)

Treatment Strategy

Destination Therapy

Bridge to Transplant

1

56y, Idiopathic dilated cardiomyopathy, INTERMACS 4, DTRS 8

2

41y, Dilated cardiomyopathy (Arrhythmogenic Right Ventricular Dysplasia), INTERMACS 3, DTRS 9

3

15y, Idiopathic dilated cardiomyopathy, INTERMACS 3-4, DTRS 7

4

42y, Viral dilated cardiomyopathy , INTERMACS 3, DTRS 8

5

65y, Dilated cardiomyopathy secondary to anthracyclines, INTERMACS 4, DTRS 2

6

67y, Idiopathic dilated cardiomyopathy, INTERMACS 4, DTRS 2

7

73y, Valvular cardiomyopathy, INTERMACS 4, DTRS 8

8

36y, Viral dilated cardiomyopathy, INTERMACS 4, DTRS 5

9

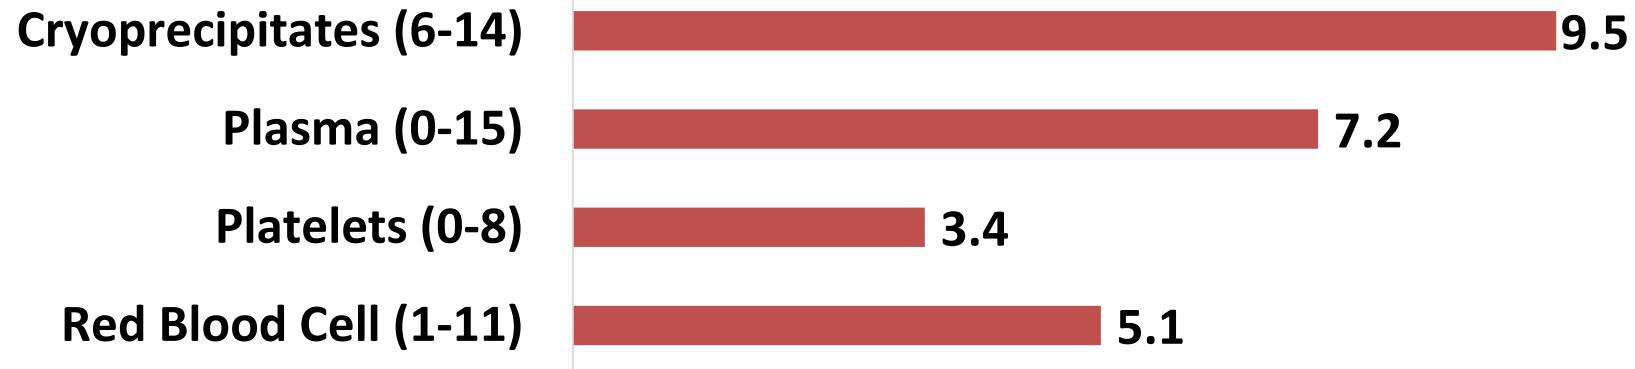

71y, Chagasic dilated cardiomyopathy, INTERMACS 3, DTRS 5

Patients

No.	Cases	Other Diagnosis	Other Devices	Other Support	Surgery
1	F, 56y, EF 35%	Positive Serology HTLV I - II	ICD	-	HM II
2	F, 41y, EF 15%	Arrhythmogenic right ventricular dysplasia	Pacemaker	VA ECMO x 6d + LVAD Centrimag x 122d	HM II + Aortic valvuloplasty + Tricuspid valvuloplasty + Repair RV aneurysm
3	M, 15y, EF 31%	-	-	-	HM II
4	F, 42y, EF 12%	-	ICD	VA ECMO x 11d, weaning 20d before	HM II
5	F, 65y, EF 30%	Breast cancer, Discoid lupus erythematosus, Sjogren's syndrome	-	-	HM II
6	M, 67y, EF 10%	-	ICD	-	HM II + Closure aortic valve
7	M, 73y, EF 20%	-	ICD	-	HM II + Aortic valvuloplasty + Tricuspid valvuloplasty
8	M, 36y, EF 10%	-	-	-	HM III
9	M, 71y, EF 15%	-	ICD	-	HM III + AVR

Adverse Events

Transfusions in HeartMate Surgery

Postoperative Adverse Events	No. (%)
Bleeding requiring surgery	3 (22%)
Sepsis	1 (11%)
Right heart failure	1 (11%)

Postoperative Length of Stay: Mean 28 days (17-57)

Mortality Case HM II

Case No.7 (1/9-11%)

- M, 73y, history of bariatric surgery, valvular cardiopathy, INTERMACS 4, DTRS 8, HM II + Aortic valvuloplasty + Tricuspid valvuloplasty.
- Reoperation to drain blood collection next to graft.
- Right heart failure symptoms, inflow cannula of HeartMate obstructed by displacement to the lateral region of the heart.
- Reintervention to reposition device.
- Sacral sore, chylothorax, septic shock due to pan-resistant gram-negative germs, renal dialysis failure, without recovery prognosis, dies at day 57 of the implant.

Rehospitalization

FCV 4/8 (50%) Follow-up 20 months (5-42)

- **Patient 1:**
 - Alteration power pump, 2 days
 - Subdural hematoma due anticoagulation requiring surgical drainage, 36 days
 - Infection driveline, 11 days
- **Patient 3:**
 - Community acquired pneumonia, 3 days
- **Patient 4:**
 - Abnormal uterine bleeding, 3 days
 - Abnormal uterine bleeding, 5 days
 - Hysterectomy, Sternal colection E. fecalis and Candida, 106 days
- **Patient 9:**
 - Hyperkalemia, 2 days
